COURSE OUTCOMES : STUDENTS SHOULD BE ABLE TO:

At the end of the course the student should be able to:

1. Evaluate different system of forces acting on rigid body under static equilibrium.
2. Analyse the frictional forces existing at different contact surfaces of the rigid body under static equilibrium.
3. Determine the centre of gravity and moment of inertia of simple and composite bodies.
4. Analyse linear and rotary motion of particle or rigid bodies using Kinematic & Kinetic Equations.
5. Evaluate solutions for mechanics problems by using virtual work method and also able to distinguish basics of mechanical vibrations.
